invention, the property is useful. The UNA and protein can be used to detect abnormal levels of hPSP (in standard blotting, amplification or immuno assays), particularly for diagnosis of digestive, non-immuno effensive, endocrine or immuno system disorders. A particular application is diagnosis of cancers of the salivary gland, through application is diagnosis of cancers of the salivary gland, through application is diagnosis of cancers of the salivary gland, through adjocuted with high levels of hPSP. The protein is also useful as antifungal, antibocterial, antiparasitic and antiviral agents and may be expressed in vivo from the DNA. The protein, or cells expressing it, are used in screening tests to identify specific (ant)agonists, e.g. antibodies (Ab), polypeptides and antisense nucleic with excessive hPSP production. Cells containing the DNA are used to express the recombinant protein and this can be used to raise Ab, useful for the application and to identify

that bind specifically to, and modulate activity of HPSP). Antaqonists that bind specifically to, and modulate activity of HPSP are used to treat bind specifically to, and modulate activity of HPSP are used to treat cancer and autorimmune discases particularly or secretory or gastrointestinal tissue, e.g. cancer of salivary gland, thyroid, gastrointestinal tract or pancreas, Sjorgen's syndrome, of graves disease, thyroiditis, insulin-dependent diabetes, pancreatitis, clerative colitis, Crohn's disease and atrophic gastrilis. Host cells containing expression vectors comprising the HPSP nucleic acid are used to produce recombinant HPSP which is used to generate antibodies and to screen for its antagonists. Antibodies are useful directly as antagonists, to transport drugs to HPSP-expressing cells, to detect cells that express HPSP to monitor patients being treated with HPSP, and for purification of HPSP from natural sources. Expression of HPSP may conditionable sequences (optionally after amplification by PCR) by hybridisation, particularly for diagnosis and monitoring of disease, but also for mapping the chromosomal sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human: tumour; diagnosis; neoplastic disease; neoplastic cell growth; proliferation; tumourigenesis; identification; cancer; cytostatic; nootropic; neuroprotective; antinflammatory; immunosuppressive; immunostimulant; antiangiogenic; leukaemia; lymphoid malignancy;

    The present invention describes an isolated antibody that binds to one of the human PRO proteins designated PR0212, PR0290, PR0311, PR0535, PR06109, PR07017, PR08019, PR06191, PR01012, PR01019, PR06191, PR010135, PR010135, PR010162, PR010182, PR010182, PR010187, PR01030, PR010107, PR011011, PR01153, PR01184, PR01187, PR01181, PR01184, PR01187, PR01181, PR01184, PR01181, PR01181, PR01184, PR01181, PR01182, PR01184, PR01181, PR01181, PR01184, PR01181, PR01181, PR01182, PR01184, PR01181, PR01181, PR01184, PR01184,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  colorectal, prostate, pancratic, lung, vulva, thyroid, hepatic carcinomas, sarcomas, glioblastomas, and various head and neck tumours), leukemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalanic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders, and inflammatory, angiogenic and immunologic disorders. AAC$8242 to AAC$836 represent PCR primers and hybridisation probes used in the isolation of the human PRO sequences. AAC$8367 to AAC$8367 to AAC$8409 represent human PRO polynucleotide and protein sequences given in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             chromosome mapping; cancer; autoimmune disease; cardiovascular disorder; cystic fibrosis; hypothyroidism; immunological disorder; amyloidosis; brain disorder; skeletal muscle disorder; eye disorder; obesity; mitochondriocytopathy; diabetes; atherosclerosis; Alizheimer's disease; neurodegenerative disorder; graft rejection; dementia; hyperlipidaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                      Thirty PRO polynucleotides encoding PRO polypeptides, useful in the treatment, diagnosis and prevention of cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

```
This sequence represents a human secreted protein amino acid sequence.
The invention relates to sequences AAA87725-A87774 which encode human
Secreted proteins AAB25763-B25812. The proteins include signal peptides.
Included in the invention are a host cell containing one of the cDNA sequences, and a purified antibody capable of binding to one of the Secreted proteins. Also contained in the invention are methods for storing the sequence data on a computer system, and a method for accreted proteins. Also contained in the invention are method for storing the sequence data on a computer system, and a method for storing the sequence data on a computer programme.

The CDNAs are useful for expressing secreted proteins or fragments to obtain antibodies capable of specifically binding to the secreted proteins and applying procedures and may be used to design expression vectors and secretion vectors. The proteins of the invention may be used to treat diseases including cancer, autoinfamune diseases, cardiovascular disorders, cystic fibrosis, hypothyroidism, immunological disorders, amyloidosis, brain disorders, skeletal muscle disorders, eye disorders, and informative disorders, grain disorders, diabetes, atheroscierosis, neurodegenerative disorders, gettic tejection, Albrahmer's disease, commentia, hyperlipidaemia, septic shock and impotence.
                                                                                                                                                                                                                                                                                                                                           Polynucleotides and polypeptides encoding proteins with signal peptides, useful in diagnostic, forensic, gene therapy and chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

AAM2563. The proteins can have activities based on the tissues and cells they are expressed in, such as: antinflammatory; antinfeummatic; antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; cardianemic; antianemic; antianemic; antianemic; antianemic; antidabetic; osteopathic; dermatological; antiallergic; antiastummatic; antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; contideration; production. The proteins and polynucleotides are useful for screening for agonitis or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, cancer, multiple sclerosis, depression, all antiderations and antides ant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel isolated equine influenza virus (wild-type and cold-adapted) proteins and viruses containing nucleic acid molecules encoding the proteins, which are useful for protecting animals from influenza virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Equine influenza virus; ei; cold adaptation; temperature sensitivity; vaccine; neiwtlNP-C-656 DNA; PeiwtlNP-C-217 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

Novel isolated equine influenza virus (wild-type and cold-adapted) proteins and viruses containing nucleic acid molecules encoding the proteins, which are useful for protecting animals from influenza virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Equine influenza virus; ei; cold adaptation; temperature sensitivity; vaccine; neiwtlNP-C-679 DNA; PeiwtlNP-C-225 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                  reassortant influence A viruses comprising atleast one genome segment of such an equine influence virus, wherein the equine influence virus, wherein the equine influence virus, wherein the equine influence virus genome segment confers atleast one identifying phenotype of the rold-adapted equine influence virus, such as cold adaptation, temperature sensitivity, dominant interference or attenuation. The viruses are useful for protecting animals from diseases caused by influence viruses. They are also used as vaccines. The present sequence is equine influence (ei) virus and the virus of virus of the virus of the virus of virus of the virus of virus o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      reassortant influenza A viruses comprising atleast one genome segment of such an equine influenza virus, wherein the equine influenza virus phenomes segment confers atleast one identifying phenotype of the cold-adapted equine influenza virus, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The patent discloses cold-adapted equine influenza viruses and

The pathogens are especially selected from Aujeskyr's disease virus, swine influence virus (SIV), por concine respiratory and reproductive syndrome virus (PRRSV), hog cholera virus (HCV) and Actinobacillus pleuropneumoniae. The vaccines are preferably composed of polynucleotide sequences encoding 3 antigens, all as part of vectors. This sequence vas suboloned into the plasmid pVRIO12 to generate plasmid pPB142 for use in the vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Multi-valent polynucleotide varcines against porcine pathogens consist of at least 3 plasmids able to express protective antigens from specified viruses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a multivalent vaccine for protecting pigs
cold adaptation, temperature sensitivity, dominant interference or attenuation. The viruses are useful for protecting animals from diseases caused by influenza viruses. They are also used as vaccines. The present sequence is equine influenza (ei) virus neiwtln (wild type) NP-C-225 protein which is encoded by neiwtlNP-C-679 DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                               .;

The present sequence represents a protein from a Swinepox virus strain an example from the present invention. The present invention specifically describes recombinant swinepox virus (SPV) comprising a foreign DNA (1) inserted into a SPV genome which is capable of being expressed in a host cell into which the virus is introduced, where (1) is inserted into: (a) an ECORI site within a region corresponding to a 3.2 kb subfragment of the Hindlil K fragment which contains both a Hindlil and an ECORI site, of the SPV genome, and optionally (b) an ACCI site within a region corresponding to a 3.6 kb Hindlil to Bgill subfragment of the Hindlil M fragment. The recombinant SPV can be used in a vaccine for immunishing an animal against SPV. The invention also provides a method for testing a swine to determine whether the swine has been vaccinated with the vaccine, particularly containing S-SPV-100.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   naturally occurring wild-type pseudorables virus. Also (1) inserted into recombinant SPV can be used in a diagnostic assay, e.g. Feline immunodeficiency virus (FIV) env and gag genes and Dirofilaria immits p39 and 22kd are useful to detect feline immunodeficiency caused by FIV and to detect heartworm caused by D. immitis respectively.
                                                                                                             Swinepox virus; SPV; recombinant; vaccine; immunisation; diagnosis; pseudorables virus; feline immunodeficiency virus; FIV; heartworm;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PE binding/translocation domains-influenza A virus nucleoprotein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    against several pathogens, especially pathogens associated with respiratory and digestive diseases. The pathogens are especially selected from Anjeskyl's disease virus, whine influence virus (SIV), portine respiratory and reproductive syndrome virus (PRRSV), hog cholera virus (HCV) and Actinobacillus pleuropneumoniae. The vaccines are preferably composed of polynucleotide sequences encoding 3 antigens, all as part of vectors. This sequence represents the SIV strain H3NZ nucleoprotein. The coding sequence was subcloned into the plasmid pVRIO12 to generate plasmid pPB132 for use in the vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Example 25 describes the construction of pvC-PENPcSaa. A fragment contg. the nucleoprotein (NP) of Influenza A virus was obtained from plasmid pApr501. pApr501 is the nucleoprotein gene cloned into the EcoRI site of pR8222, by PCR with oligonucleotide primers which added a SacII site adjacent to the ATG codon of NP to give the sequence of AAQ38409, and the last 5 amino acids of PR followed by a termination codon and an EcoRI site to the 3' end of NP to give the sequence shown in AAQ38410. The PCR fragment was digested with SacII and EcoRI. The resulting plasmid pVC-PEMI-2 digested with SacII and EcoRI. The resulting plasmid is named pVC-PENPCSEAB. The S' and 3' ends of the PRNPSaa insert (AAQ38411) were verlified by sequencing. This construction fuses the binding and translocation domains of PE to the Influenza A nucleoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Escherichia coli; E. coli; proliferation; inhibition; screening; antimicrobial; bacterial growth; antisense therapy; antibacterial.

                                                                                                                                                                                                                                                                                                                                                                                                                        AAA65809 to AAA65889 and AAA66058 to AAA66138 represent nucleotide sequences derived from Escherichia coli which inhibit E. coli proliferation. AAA65890 to AAA66055 and AAB15806 to AAB16040 represent nucleotide and protein sequences associated with E. coli proliferation. AAA66057 represent primers used for sequencing E. coli proliferation inhibiting nucleotide inserts in an example from the present invention. Methods from the present invention can be used to indicate a proliferation inhibiting nucleotide done in a microorganism, by contacting a microorganism with a proliferation-required gene in a microorganism, by contacting nucleic acid identified in another organism, and determining if nihibition occurs in the second microorganism. The nucleic acid sequences identified as being required for bacterial growth and proliferation, can be used for antisense therapy for killing bacteria.
                                                                                                        Ohlsen KL, Trawick J, Forsyth RA, Froelich JM, Carr GJ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                Novel polynucleotides and polypeptides associated with microorganism proliferation, used to identify inhibitors of bacterial growth and proliferation, for use in antisense therapy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0

The present sequence represents a Pseudomonas aeruginosa polypeptide sequence. P. aeruginosa is an opportunistic human pathogen present in soil water and plants. The specification describes virulence polypeptides and nucleic acid sequence encoding such polypeptides. These sequences can be used to identify a compound which is capable of decreasing the expression of a pathogenic virulence factor. Compounds that inhibit the expression or activity of virulence factor polypeptides can be used to treat pathogenic infections, especially where the infection is a P. aeruginosa infection.
                                                                                                                                                                                                                                                                                                                                                                                     note: the sequences given in the specification were poorly legible, and in some instances assumptions were made as to the identity of the residue; it is therefore possible that the sequence given below is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0

Fructose-bisphosphate aldolase class I (EC 4.1.2.13) (FBP aldolase).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           "Cloning, sequencing, and characterization of the gene encoding the class I fructose-1,6-bisphosphate aldolase of Staphylococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    J. BACKETIOL. 175:7485-7489(1993).

-!- CATALYTIC ACTIVITY: D-fructose 1,6-bisphosphate - glycerone phosphate + D-glyceraldehyde 3-phosphate.
-!- PATHWAY: SIXTH STEP IN GLYCOLYSIS.
-!- SIMILARITY: BELONGS TO CLASS I FRUCTOSE-BISPHOSPHATE ALDOLASE

IT IS ESSENTIAL FOR DNA REPLICATION AND REPAIR OF DAMAGED DNA (BY SIMILARITY).

--- CATALYTIC ACTIVITY: NAD(+) + (deoxyribonucleotide)(N) + (deoxyribonucleotide)(M) = AMP + nicotinamide nucleotide + (deoxyribonucleotide)(M) = AMP + nicotinamide nucleotide + 1 SIMILARITY: BELONGS TO THE NAD.DEPENDENT DNA LIGASE FAMILY.

Methyltransferase/RNA helicase (EC 2.7.7.48) (183 KDa protein) [Contains: Methyltransferase/RNA helicase (MT/HEL) (126 kDa protein)].
Tomato mosalc virus (strain Kazakh K2) (TOWY) (TWY strain K2).
Viruses; ssRNA positive-strand viruses, no DNA stage; Tobamovirus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MOIL BIOI.
